

String of Buttons

Crassula perforata

- Native to South Africa, I get my name from the flat bunches of leaves on my stems that look like little buttons.
- While I'm young, my stems will stand up straight, but as I grow they'll become pendant, making me a great addition to a hanging basket.
- I grow relatively quickly, crave well-draining soil and full sun, and I appreciate partial midday shade in hot summer climates.
